Executive Director's Summary

BY ANA BRADLEY • EXECUTIVE DIRECTOR, SENTIENT

We founded Sentient to address a glaring blind spot in mainstream coverage — the vast and often invisible impacts of factory farming on animals, the environment, public health and rural communities. Factory farming is one of the most destructive systems on the planet, yet its role in the crises facing our world is still largely out of sight. Our mission is to change that with rigorous, fact-checked journalism that exposes the forces behind this destruction.

In just a few years, Sentient has grown from a small newsroom into a trusted media organization, cited and republished by The Guardian, The Washington Post, The Wall Street Journal and others. Our work now reaches millions of readers and listeners, from policymakers in Washington to Iowa residents on the front lines of factory farm pollution.

In this report, you'll read how Sentient is changing the media narrative. Our work surfaces the stories of frontline communities, pushes the powerful to confront important truths and drives all of our journalist colleagues to produce a better news ecosystem. Thank you for helping us build a more transparent and informed public conversation.

Ana Bradley

Executive Director, Sentient

Changing the Media Narrative

Our vision is a new public discourse: from a news ecosystem where factory farming is underreported to one where the public sees factory farming for what it is. By adding critical information — rigorous reporting and incontrovertible data about climate emissions, air and water pollution, animal suffering, zoonotic disease and damage to frontline communities — Sentient is changing the media narrative, a critical component of changing the public narrative writ large. This new public discourse will enable and embolden frontline communities and influential decision makers alike to hold the industries that drive factory farming to account.

Sentient in action

Factory farming is one of the most damaging systems on the planet — harming animals, accelerating climate change, polluting air and water, increasing the risk of pandemics and draining rural economies. Yet most of the public still has no idea how their food is made or the impact it has on our planet. A Sentient analysis found that 96% of climate news stories neglect to mention animal agriculture as a source of carbon emissions. This analysis was featured in [The Guardian](#) and shared by media organizations including [Covering Climate Now](#).

Meat is a leading emissions source - but few outlets report on it, analysis finds

Sentient Media reveals less than 4% of climate news stories mention animal agriculture as source of carbon emissions

BY THE NUMBERS

Sentient's journalism is being cited, republished and read more widely than ever before — bringing the realities of factory farming into mainstream conversations about food, climate and public health.

Sentient’s reporting drives journalists to strengthen their coverage of factory farms

Through our Food & Farming Journalism Network, collaborations with major outlets and growing visibility across the media landscape, our work is influencing the next generation of journalists and shaping how factory farming is covered. As our reach expands, so does our impact — fueling momentum for more accurate, consistent and in-depth reporting across the food and climate beats.

Telling Stories With Frontline Communities

Sentient's regional reporting empowers frontline communities to agitate for change

Sentient's reporting is powered by real stories from the frontlines of factory farming, surfacing the stories to a national audience. Community residents have used our reporting to hold regulators accountable, and legal advocates and major media outlets have cited our work to push for greater transparency. Whether inside a Seaboard Triumph Foods pork plant or embedded with a transnational coalition to fight mega-dairy expansion, Sentient storytelling connects local experiences to national conversations.

Examples of regional impact:

- We published whistleblower video footage from the Seaboard Triumph pork processing facility which quickly reached over 1 million views on TikTok. Thousands of comments from locals included, “We have been screaming about our water and air quality for a while! Woodbury County deserves clean water & air!” and “Sioux City is just taking L after L from this meat plant. I used to load hogs when I was younger and I heard horror stories about it THEN, and that was 10 years ago. Good lord. What a mess.”
- Citizens filed a complaint with the Iowa Department of Natural Resources using Sentient’s reporting to show officials failed to take action despite their well-documented knowledge of the conditions.
- Sentient’s reporting on a [dairy manure spill](#) in Wisconsin spurred an official with Public Justice, a legal advocacy group that takes on corporate corruption, to reach out to an environmental legal advocacy group to file a lawsuit.
- Our local coverage is sparking national coverage. Sentient’s original reporting on cancer in Iowa, which included communications and documents produced by our records request, was then reported in a [Bloomberg](#) feature months later.
- In 2025, we published 13 articles exploring factory farming in Iowa and its impact on local communities and the environment. These stories have reached millions of readers throughout the U.S. through republications in various outlets from Yahoo! News to Floodlight News to Investigate Midwest and more. Our investigative reporter appeared on Iowa Public Radio (IPR) and The Talk of Chicago, which have a combined listenership of 400,000 people.

“

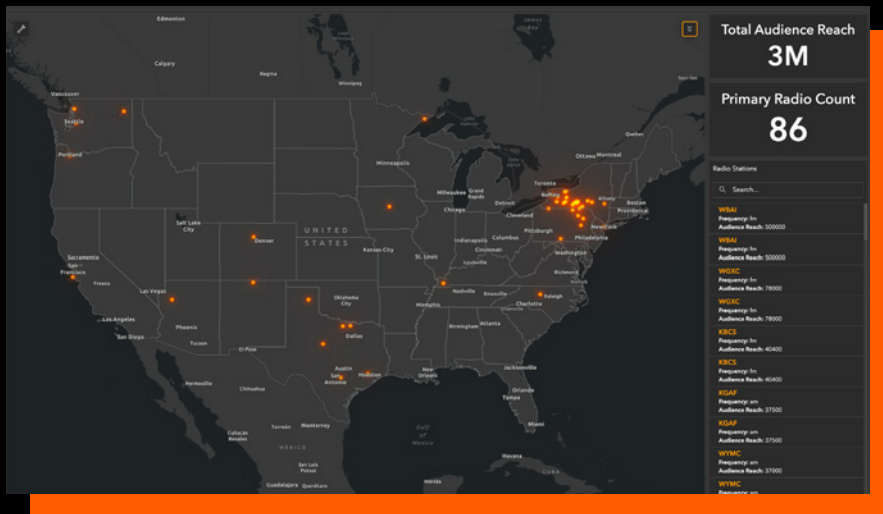

Good work on this story. We are trying to be vocal about the impacts of these policies on our farmers and rural communities.”

— Influential figure in Iowa agriculture in reference to our coverage

Sentient on the air

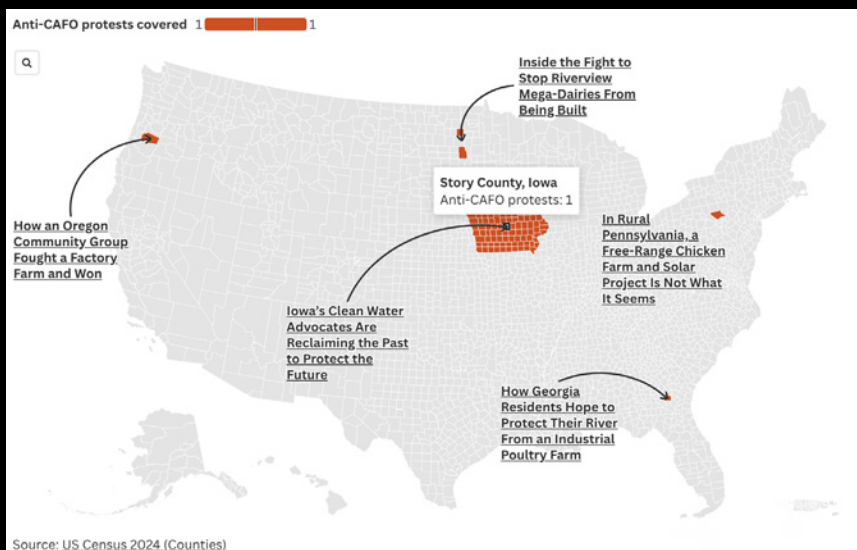

Sentient's stories have been distributed across local and public radio stations throughout the US reaching 44 million listeners. We [mapped our reach](#) using GIS technology to better understand which communities are engaging with our work.

For example, our story ‘[Who Is Brooke Rollins, Trump’s Agriculture Secretary Pick?](#)’ was picked up by 86 radio stations, reaching an estimated 3 million listeners, as the map below illustrates.

Opposition to factory farming, mapped

Across the country, residents are organizing to oppose the construction and expansion of factory farms in their communities. Sentient reporters are telling the stories of this nascent movement, and mapping the coverage to illustrate how momentum is growing on a national scale.

Reaching Lawmakers and Government Officials

Sentient’s investigations are informing decision makers and shaping real-world outcomes. Our reporting has been cited in a letter from Members of Congress to the USDA, referenced by lawmakers on the floor of the Senate and used as evidence in pending legal cases — demonstrating how independent media can impact policy and hold powerful institutions to account.

Phrases Newly Banned At USDA Include ‘Safe Drinking Water’ and ‘Climate Change,’ Leaked Memo Reveals

Over 100 words and phrases are now banned, many of them essential to any discussion of climate.

Reaching lawmakers and government officials

At a glance

- Our reporting was quoted in a [letter](#) to USDA Secretary Brooke Rollins signed by lawmakers, including Bernie Sanders and Cory Booker, as evidence of the Trump administration's directive banning certain words at the USDA.
- On the Senate floor, Senator Jack Reed [discussed](#) Cal-Maine's \$44 million bailout as part of a bill he would like to introduce to [limit indemnity payouts to poultry companies](#). Sentient was the first newsroom to report this figure and this story was widely shared, reaching nearly a million readers on our website alone.
- A law firm has cited our coverage of avian flu in a lawsuit against the California Department of Food and Agriculture over being denied avian flu data, specifically data on which farms are under quarantine.
- Sentient's reporting on the closure of the only federal [animal welfare lab](#) prompted a federal employee to host a [Reddit AMA](#), allowing the public to engage with and ask questions about animal welfare.
- Our coverage of the Farm Bill was republished by outlets including [Truthdig](#).
- Our newsletter audience includes federal agency officials.

What's Next for Sentient?

Plans for 2026

In 2026, Sentient will scale its journalism and partnerships to strengthen public understanding of factory farming's impact on climate, health and frontline communities. Building on our momentum from 2025, we'll focus on expanding reach, deepening collaborations and embedding rigorous reporting throughout the broader media ecosystem.

Our priorities for 2026:

- **Expand local journalism partnerships** including collaborations with public radio stations and local newsrooms in factory-farm-affected communities.
- **Publish breaking news and deeply reported investigations** that expose the hidden costs of factory farming and connect local stories to a national audience.
- **Broaden and deepen relationships with editors** at leading climate, farming, policy and investigative outlets to make coverage of factory farming a consistent part of their reporting.
- **Publish a policy-focused newsletter** reaching lawmakers, agency staff and policy influencers with credible journalism that informs decision-making.
- **Grow the Food & Farming Journalism Network** to 400 members and support early-career journalists covering beats that intersect with factory farming.
- **Expand community engagement** by hosting listening sessions with frontline organizations and publishing multilingual content.

Together these initiatives will move us closer to our vision: a new public discourse where the realities of factory farming are visible, accurately reported and central to climate and policy conversations.
